- Version control system decided upon, locally configured for all developers, and learned.
- Local development environments set up and configured locally for all developers.
- PHP/MyAdmin Setup and configured for server
- Developers learning Drupal
- Initial Drupal page setup

Version 0.2 – February 2f

- Initial database for testing set up and populated with basic produce
- Basic regions and months for testing establish
- Basic produce assigned months and regions
- Initial Home Page set up. Features a month drop down and region drop down
- selecting a month and region filters the list of produce and populates list
- Initial Help Page set up, contains placeholder message
- Initial Recipes Page set up, contains placeholder message
- Initial Contact Us Page set up
- Initial About Us page set up, has forms

Known bugs: After selecting a month and region on the home page, if no produce is found, the drop down menu's disappear.

Testing done: Dropdown query testing produced the known bug. Pages with forms that allow input contain automatic testing, such as checking for correctly formatted email addresses and empty fields.
